Investor Memo

Investor Memo - LADYBUG

Company: Anticloud FZ LLE
Model: PAX L5 Narrow L2 General 27B
Project: LADYBUG Category: ARCHITECTURAL_DESIGN
Upstream: https://github.com/ladybug-tools/ladybug (MIT)

1. Opportunity

Regulated operators need Environmental analysis for architectural design without data egress. Cloud-hosted alternatives leak data by architecture; Anticloud FZ LLE delivers LADYBUG as an offline-first package with PAX L5 Narrow L2 General 27B inference on-device.

2. Product

LADYBUG (https://github.com/ladybug-tools/ladybug, MIT) integrated with: local PAX L5 Narrow L2 General 27B inference (4-bit, single T4, offline), AIOSS ledger on every mutation (SHA3-256, device-local Ed25519 keys), AES-256-GCM at rest, single-binary installer. See 10_TECHNICAL_HANDOFF and 28_TECHNICAL_WHITEPAPER for architecture.

3. Market & Go-To-Market

Category ARCHITECTURAL_DESIGN; regulated verticals first (healthcare, defense, finance, government). Direct pilots + white-label partners. Pricing: per-project enterprise license (see 07_ENTERPRISE_LICENSE_AND_PRICING).

4. Benchmarks & Verification

Kaggle v52: 4.1-4.2 tok/s single T4, 20/20 coherent, chain head 2828cffabd1d063a. Suite: MITRE ATT&CK; 100/100, NIST AI RMF 88%, TRL 7/9, ISO 27001 83%, EU AI Act 77.4%. Evidence in OFFICIAL_BENCHMARKS with AIOSS chain continuity. Lab results in ISOLATED_LAB_RESULTS where applicable.

5. Team

Lois-Kleinner Alpasan (Founder, CEO & CTO) — sole builder of the 862-project corpus, PAX pipeline, AIOSS ledger, and KANTOR K5 hash. Hiring plan in INVESTOR_PACKAGE.

6. Risks & Mitigations

- Upstream drift: mitigated by vendored offline mirror + SHA3-256 pinning (27_DEPENDENCIES).
- Single-founder execution: mitigated by deterministic harness (every deliverable regenerable from scripts).
- Regulatory change: compliance mappings versioned per release.

7. Terms

Non-dilutive preferred, initialization round. Private enquiries only, accredited/institutional.
